Stat 201 Group 45 Contract

Team Goals:

Our team goal is to complete the project at a proficient level of all group members involved. We also want to be able to communicate well as a team to meet any deadlines that arise. We expect to do this by scheduling weekly meetings (on Wednesdays during tutorial) as a standard plus additional meetings if necessary to go over the distribution of work and constant check ins to make sure everyone is able to keep up with the pace of the project. We want every milestone of the project to be complete 2 days prior to the deadline in case we run into any unexpected issues.

Accomplishments:

We want to be able to submit a project that every member of the group is proud of. We also want to be able to communicate effectively as a group and distribute the work in a way that everyone is happy with.

Skills we want to Develop/Refine:

We want to be able to develop a better understanding of statistical inference and properly visualize data. Additionally we want to be able to learn how to effectively communicate our code amongst our group members by version control or any other method.

Policies & Procedures

Rules that we can agree on would be to show up to scheduled meetings on time, usually during tutorial time, respond to any messages from the group within a

reasonable time frame, and to fully complete previously set out work from the group.

Consequences:

If a team member is not available and the rest could not contact them without a valid reason, we will contact the TAs for advice. Otherwise, they may get a lower score for their teamwork submission.
